

# Marine Power Reinvented

**Still lugging around lead? That ship has sailed.**

Unlike old-school lead-acid batteries, our lithium-ion systems provide fast charging and last up to 5x longer—with zero maintenance. That means more time on the water, less time at the dock, and total confidence in your power system.

## **Built for Safety:**

- **UL1973 Certified** The gold standard of protection for marine power systems.
- **IP66:** Water-resistant and ready for harsh marine conditions.
- **ABYC E-13 Compliant:** Meets the latest safety standards for lithium-ion battery systems in boats.

**Tougher Than the Water's Roughest Days:** Aircraft-grade aluminum enclosures contain heat and protect your boat—unlike plastic cases that risk catastrophic damage.

**Peaceful Power, Wherever You Drop Anchor:** Ditch the fumes and noise. Enjoy quiet, reliable energy without the generator—day or night, sun or storm.

## **SMART PROTECTION**

The NeverDie® Battery Management System includes internal shutdown technology that automatically disconnects power in extreme conditions, preventing overcurrent and thermal runaway to keep you safe on the water.

## **FOR YOUR PEACE OF MIND**

- Enclosure can withstand 22,000 lb crush test and 150G impact test
- Passed rigorous tests for vibration, shock, puncture, and more
- Fire and toxic vapor-resistant for ultimate safety and reliability

## **PREMIUM MEETS PERFORMANCE**

Trusted by brands like Chris Craft and Nordhavn for reliable, high-performance power.
